

# Towards visual analytics of bio-workflows

George Byelas

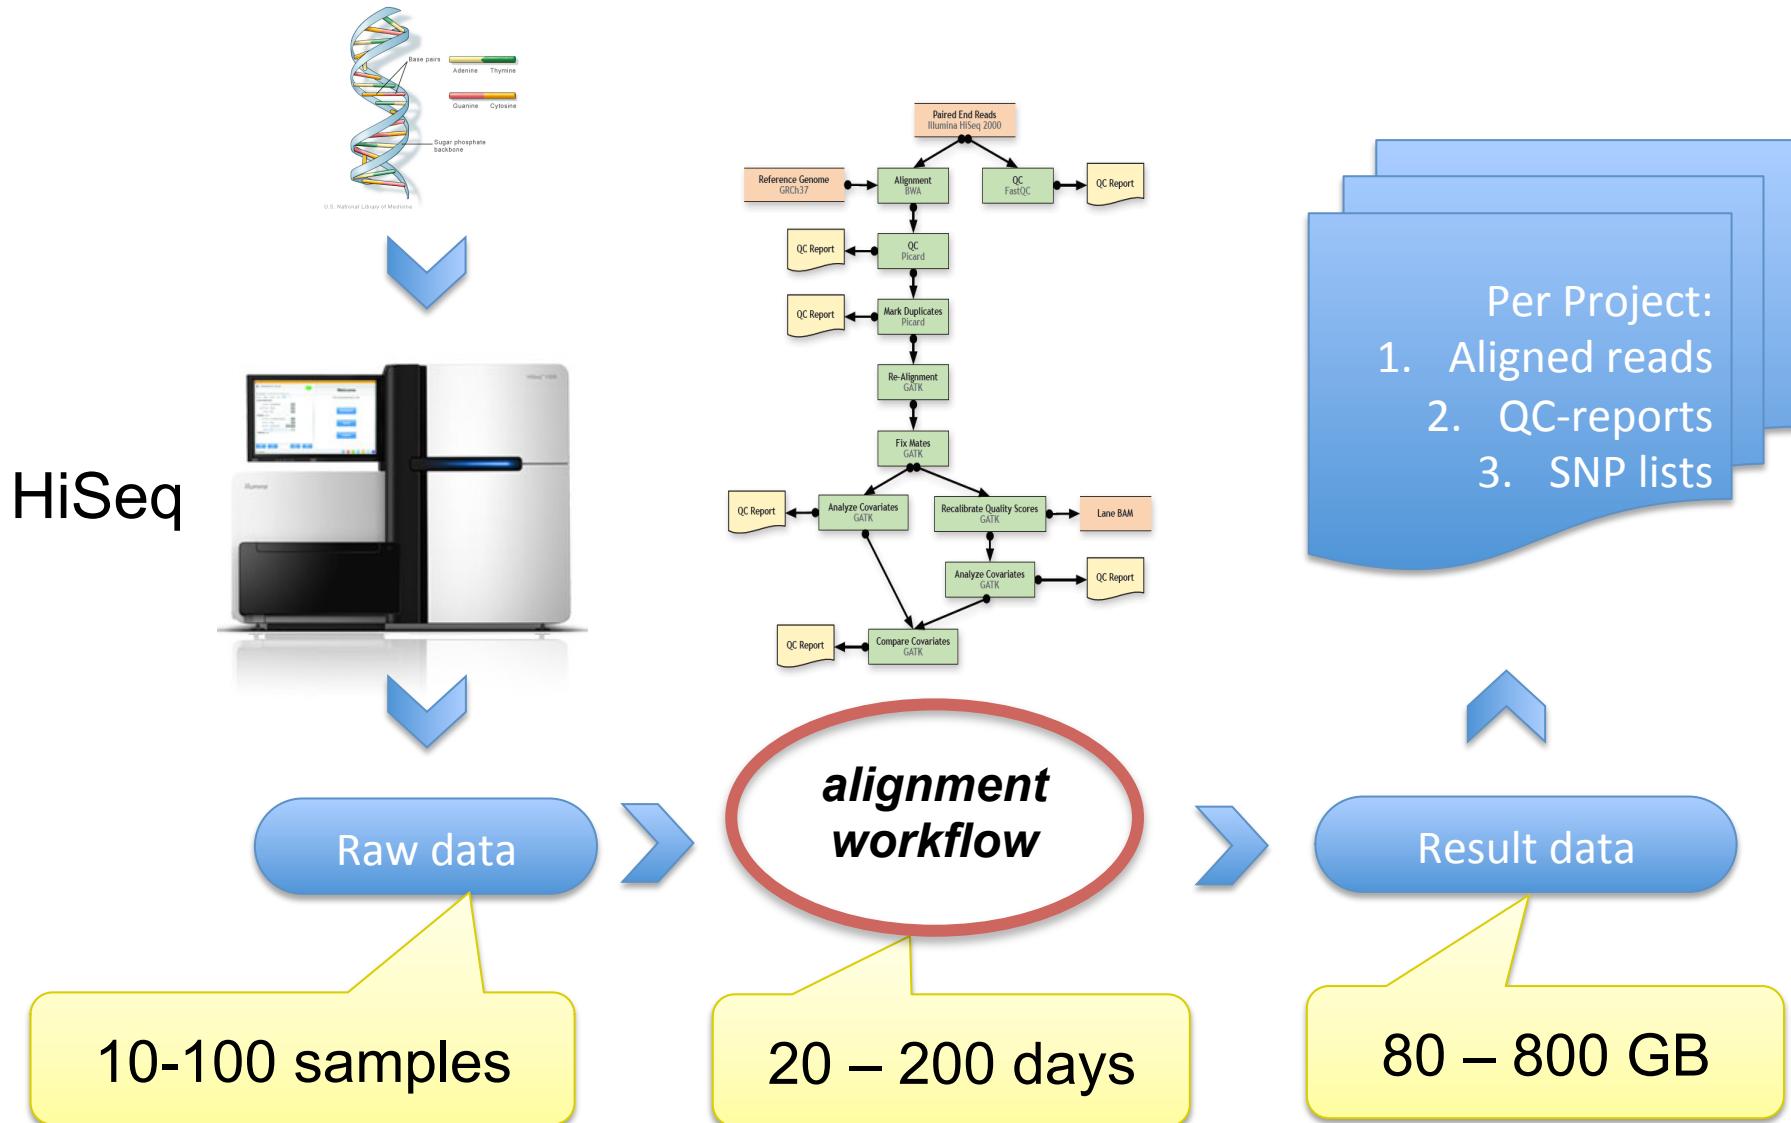

University Medical Centre Groningen, the Netherlands

NBIC-2013, Lunteren, Apr. 16<sup>th</sup>, 2013

# Content

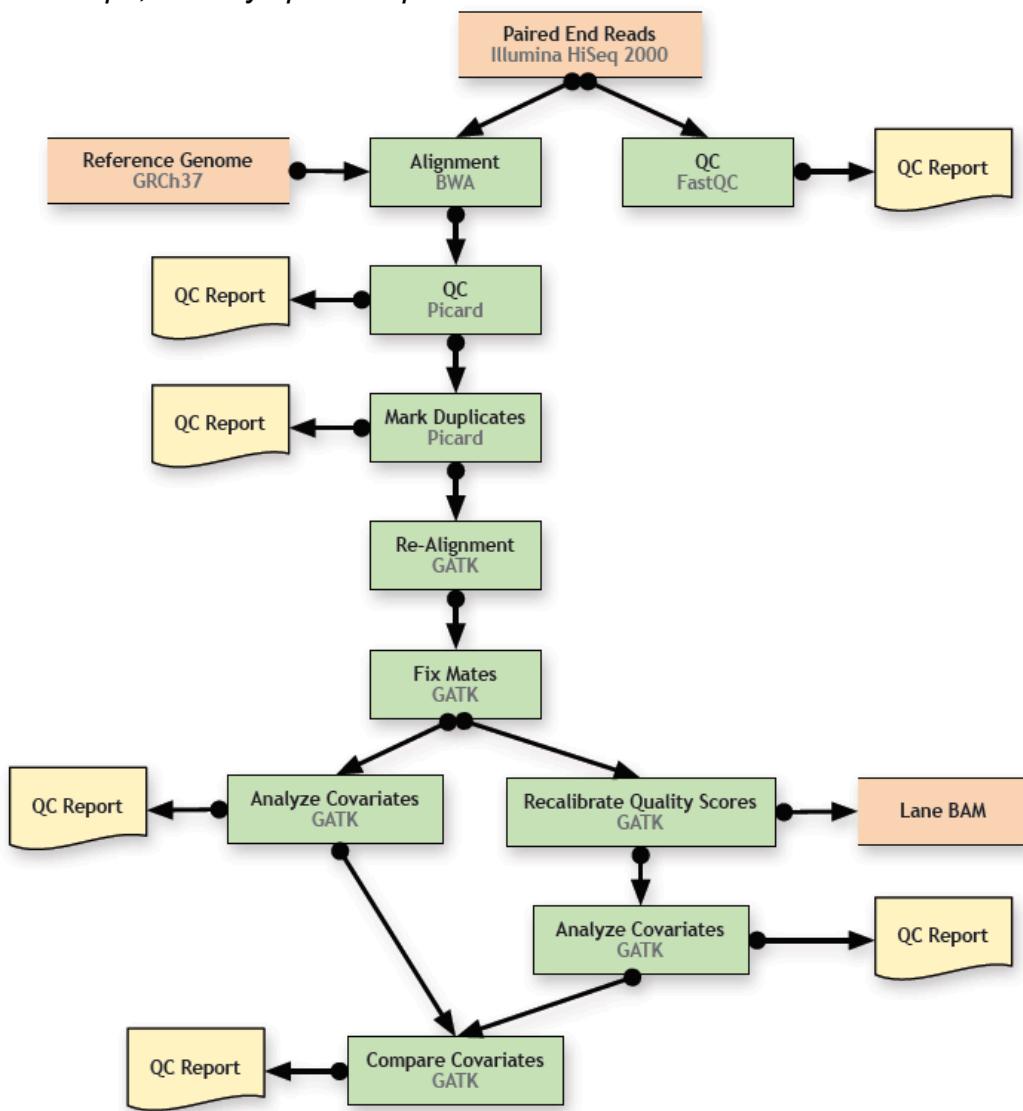

- Bio-workflows
- State of the art workflow visualizations
- How workflow visualization can be improved

# Example: NGS alignment workflow

# Alignment & SNP calling workflow

31 steps, ≥ 2 days per sample

- **Input**
  - Analysis protocols
  - Sample DNA data
  - Reference DNA data
- **Analysis**
  - Scripts are generated and executed
- **Output**
  - Aligned DNA and QC reports

# An analysis job (script) generated from a protocol

```
#!/bin/bash
#PBS -q test
#PBS -l nodes=1:ppn=4
#PBS -l walltime=08:00:00
#PBS -l mem=6gb
#PBS -e $GCC/test_compute/projects/batch4/intermediate/test1/err/err_test1_BwaElement1A102a_FC81D90ABXX_L7.err
#PBS -o $GCC/test_compute/projects/batch4/intermediate/test1/out/out_test1_BwaElement1A102a_FC81D90ABXX_L7.out
```

backend specific

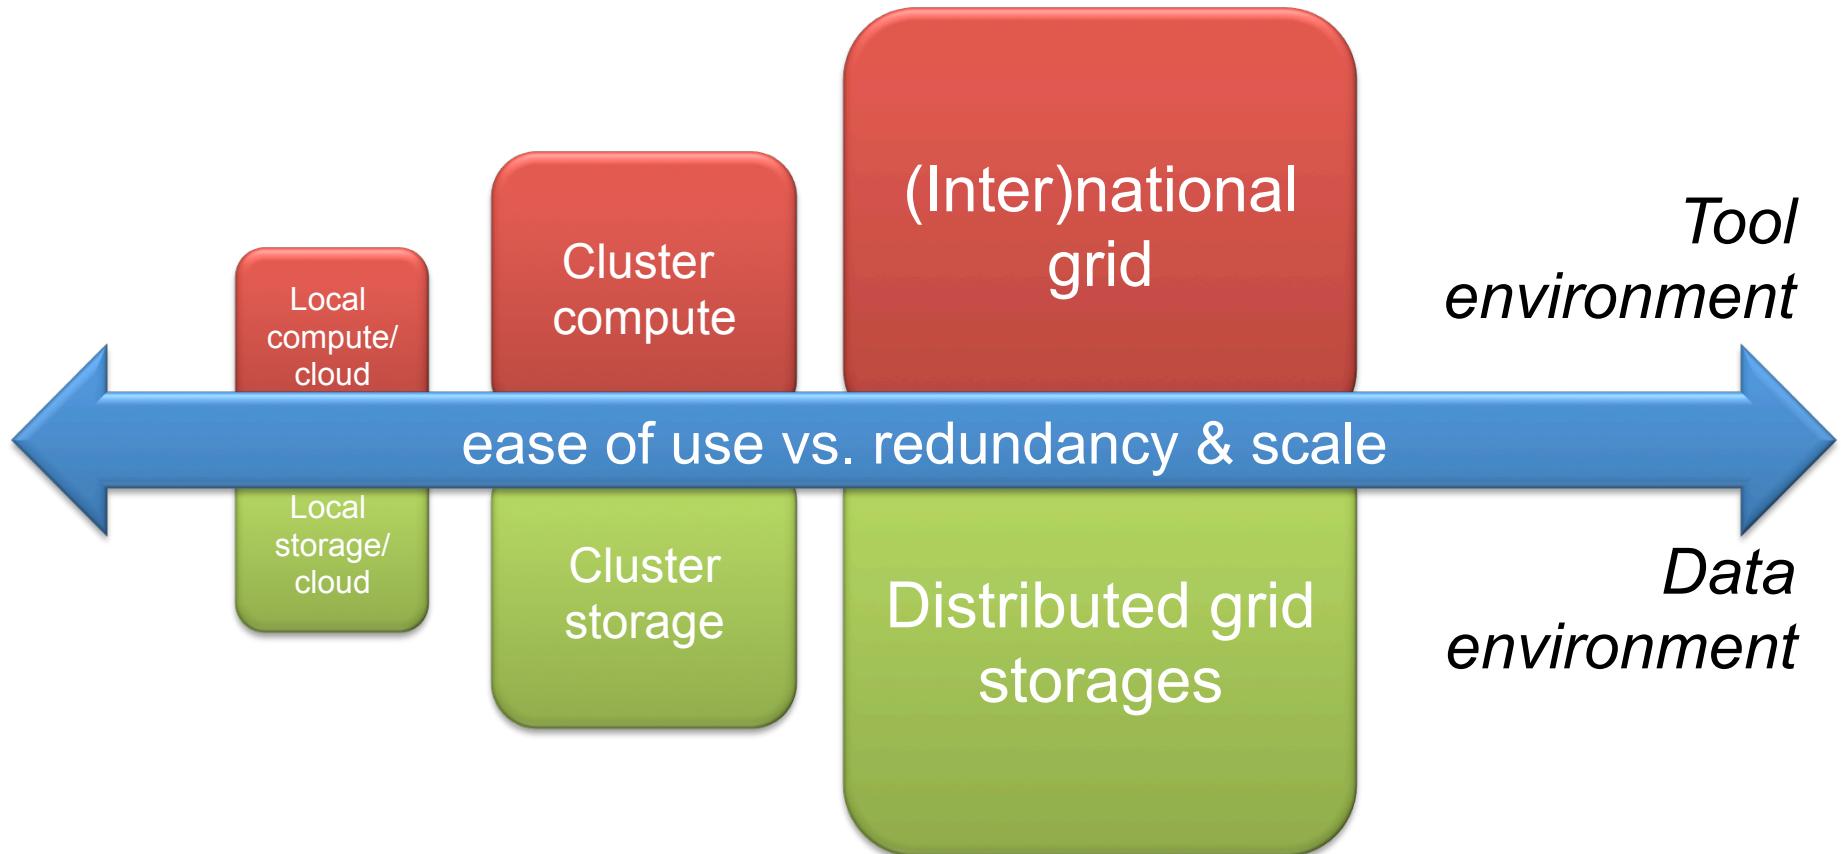

```
mkdir -p $GCC/test_compute/projects/batch4/intermediate/test1/err
mkdir -p $GCC/test_compute/projects/batch4/intermediate/test1/out
printf "test1_BwaElement1A102a_FC81D90ABXX_L7_started " >>$GCC/test_compute/projects/batch4/intermediate/test1/log_test1.txt
date "+DATE: %m/%d/%y%tTIME: %H:%M:%S" >>$GCC/test_compute/projects/batch4/intermediate/test1/log_test1.txt
date "+start time: %m/%d/%y%t %H:%M:%S" >>$GCC/test_compute/projects/batch4/intermediate/test1/
test1_BwaElement1A102a_FC81D90ABXX_L7.txt
echo running on node: `hostname` >>$GCC/test_compute/projects/batch4/intermediate/test1/
test1_BwaElement1A102a_FC81D90ABXX_L7.txt
```

```
/target/gpfs2/gcc/tools//bwa-0.5.8c_patched/bwa aln \
/target/gpfs2/gcc/resources/hg19/indices/human_g1k_v37.fa \
$GCC/test_compute/projects/batch4/rawdata/110121_I288_FC81D90ABXX_L7_HUMrutRGADIAAPE_1.fq.gz \
-t 4 \
-f $GCC/test_compute/projects/batch4/intermediate/A102a_110121_I288_FC81D90ABXX_L7_HUMrutRGADIAAPE_1.fq.gz.sai
```

analysis specific

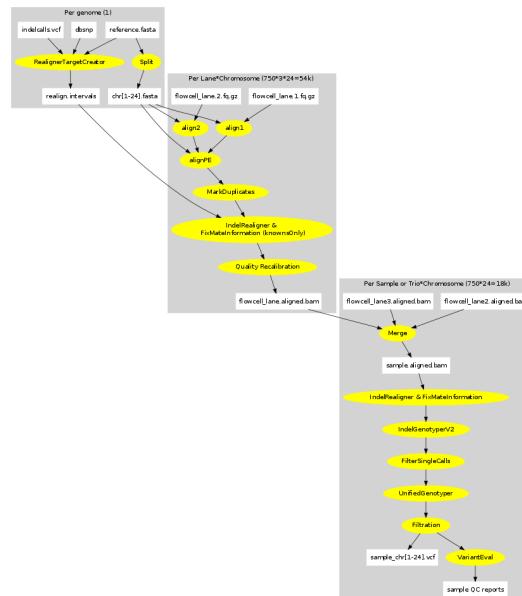

```
printf "test1_BwaElement1A102a_FC81D90ABXX_L7_finished " >>$GCC/test_compute/projects/batch4/intermediate/test1/log_test1.txt
date "+finish time: %m/%d/%y%t %H:%M:%S" >>$GCC/test_compute/projects/batch4/intermediate/test1/
test1_BwaElement1A102a_FC81D90ABXX_L7.txt
date "+DATE: %m/%d/%y%tTIME: %H:%M:%S" >>$GCC/test_compute/projects/batch4/intermediate/test1/log_test1.txt
```

# Computational environments

# Bio-workflow complexity

- Many analysis steps
  - Many analysis jobs
  - Different analysis tools and their dependencies
- Large various data involved
- Heterogeneous resources

## Number of analysis jobs to show

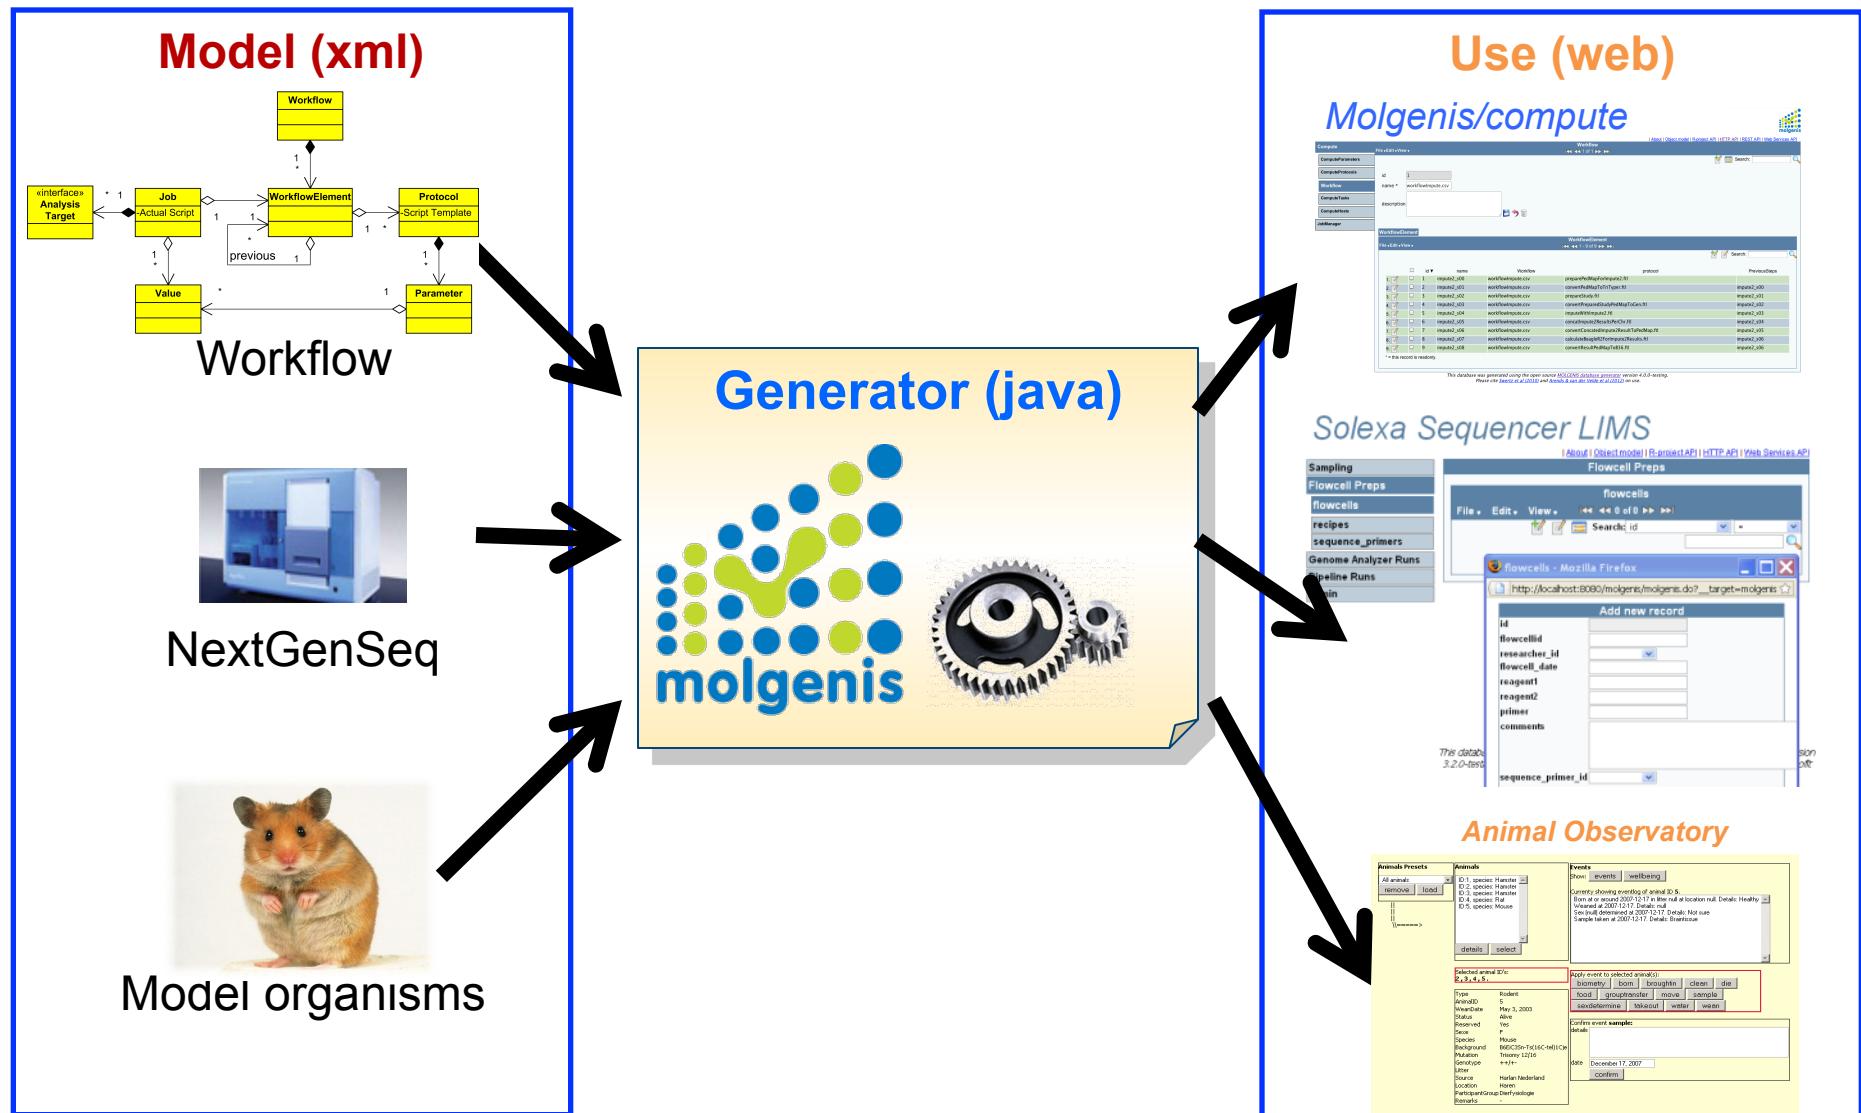

- Imputation step in GoNL

$$\text{number\_jobs} = \sum_{chr=1..22} \frac{\text{Length}_{chr}}{5\text{-megabase}} * \frac{\text{number\_of\_samples}}{500}$$

$$10000 = 500 * \frac{10000}{500}$$

## Visualization

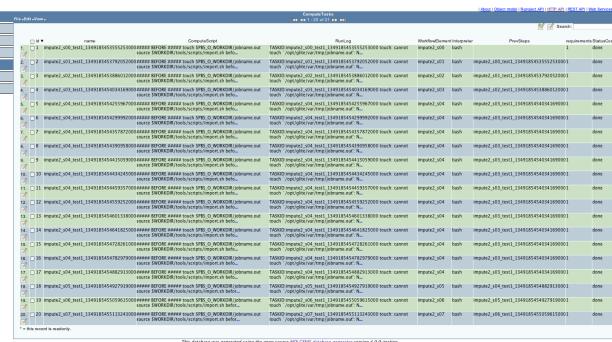

# Triana/Kepler/Inforsense

# How workflow visualization can be improved (techniques taken from software visualization)

# Why workflow visualization is complex

- Workflow complexity leads to
    - Large graphs/tables/logs
    - Lots of attributes
    - Workflow changes and refinements

# Requirements for visual analytics

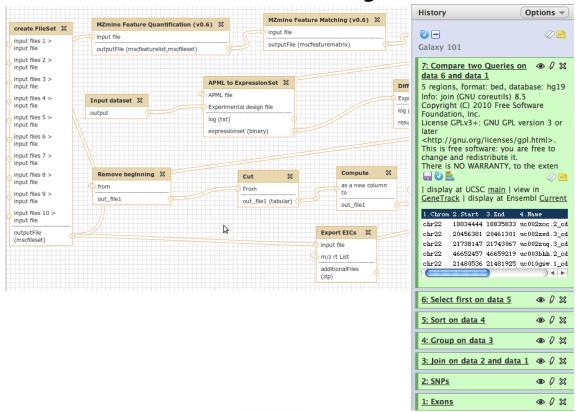

- Different views
  - Design view: structural overview and zoom in
  - Run-time execution view: history and zoom in
  - Behavior view: how parameters influence results data/quality
  - Evolution view: what elements were introduced/removed

# Approach

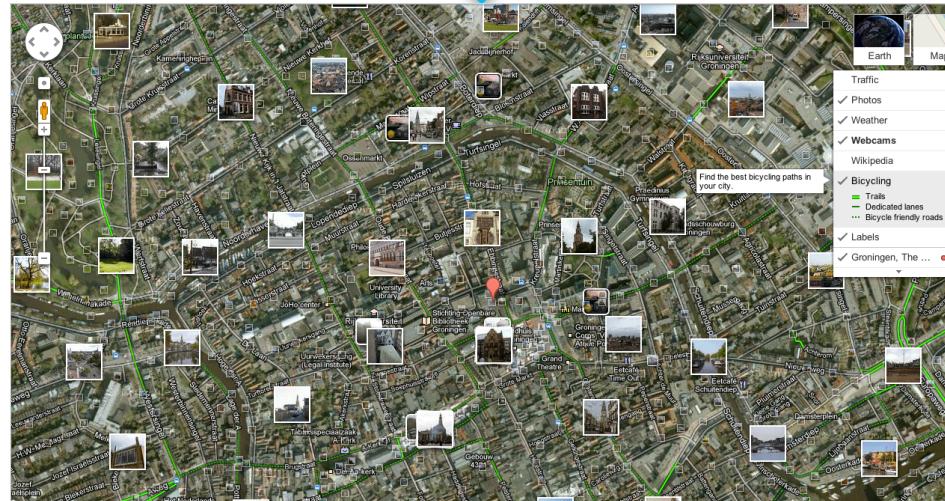

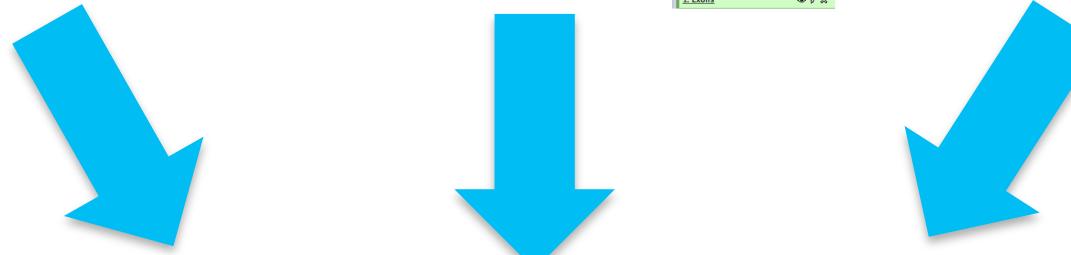

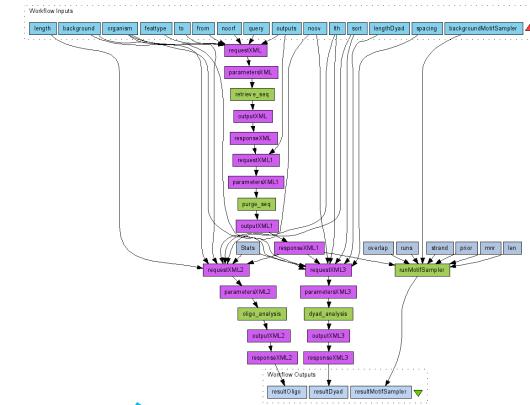

## Molgenis

## Galaxy

## Taverna

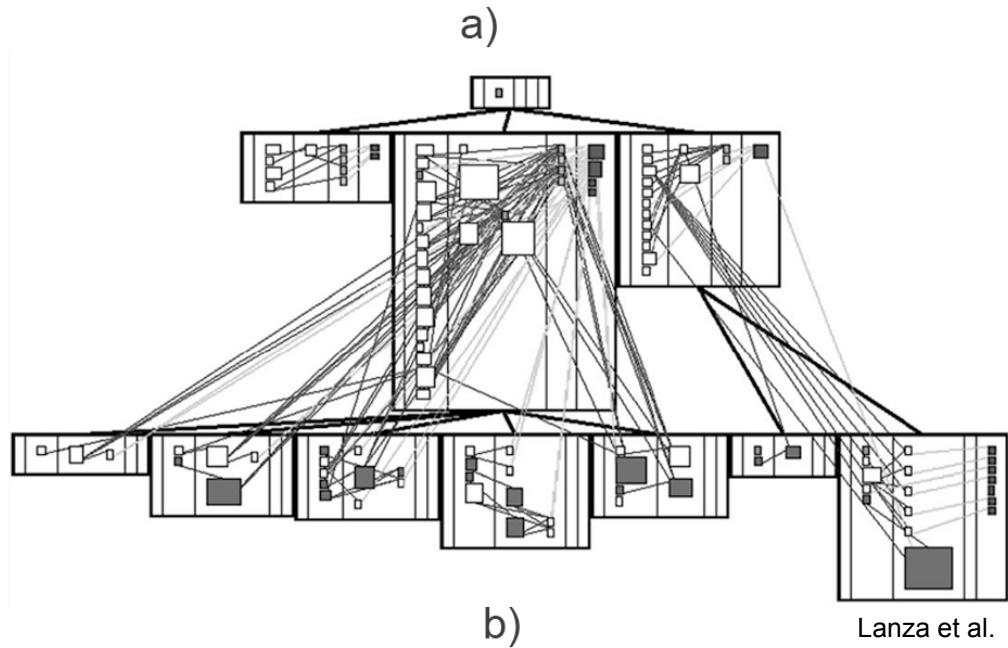

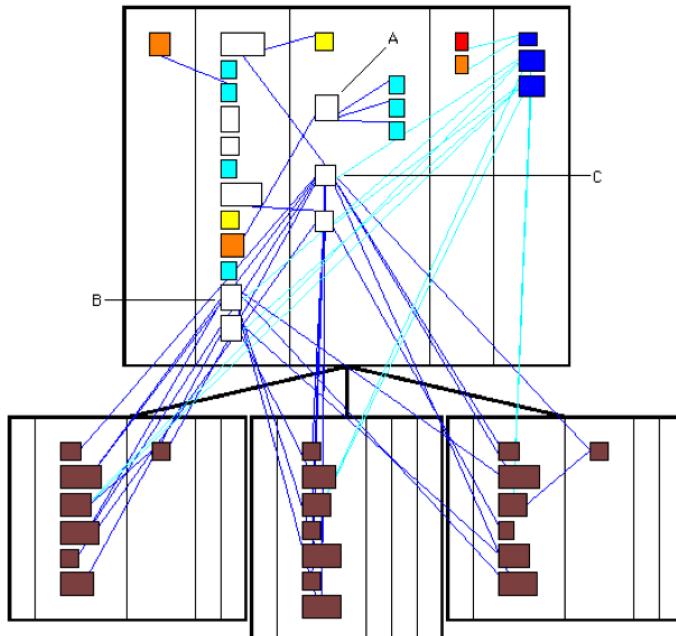

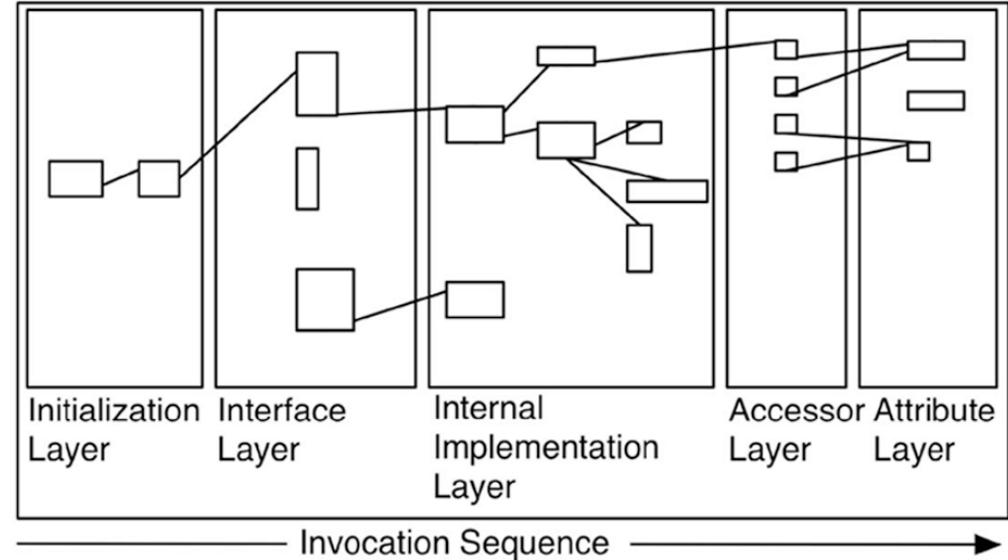

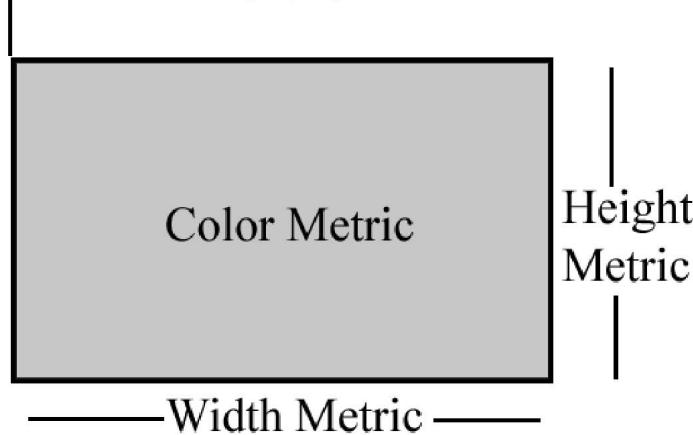

# Starting point

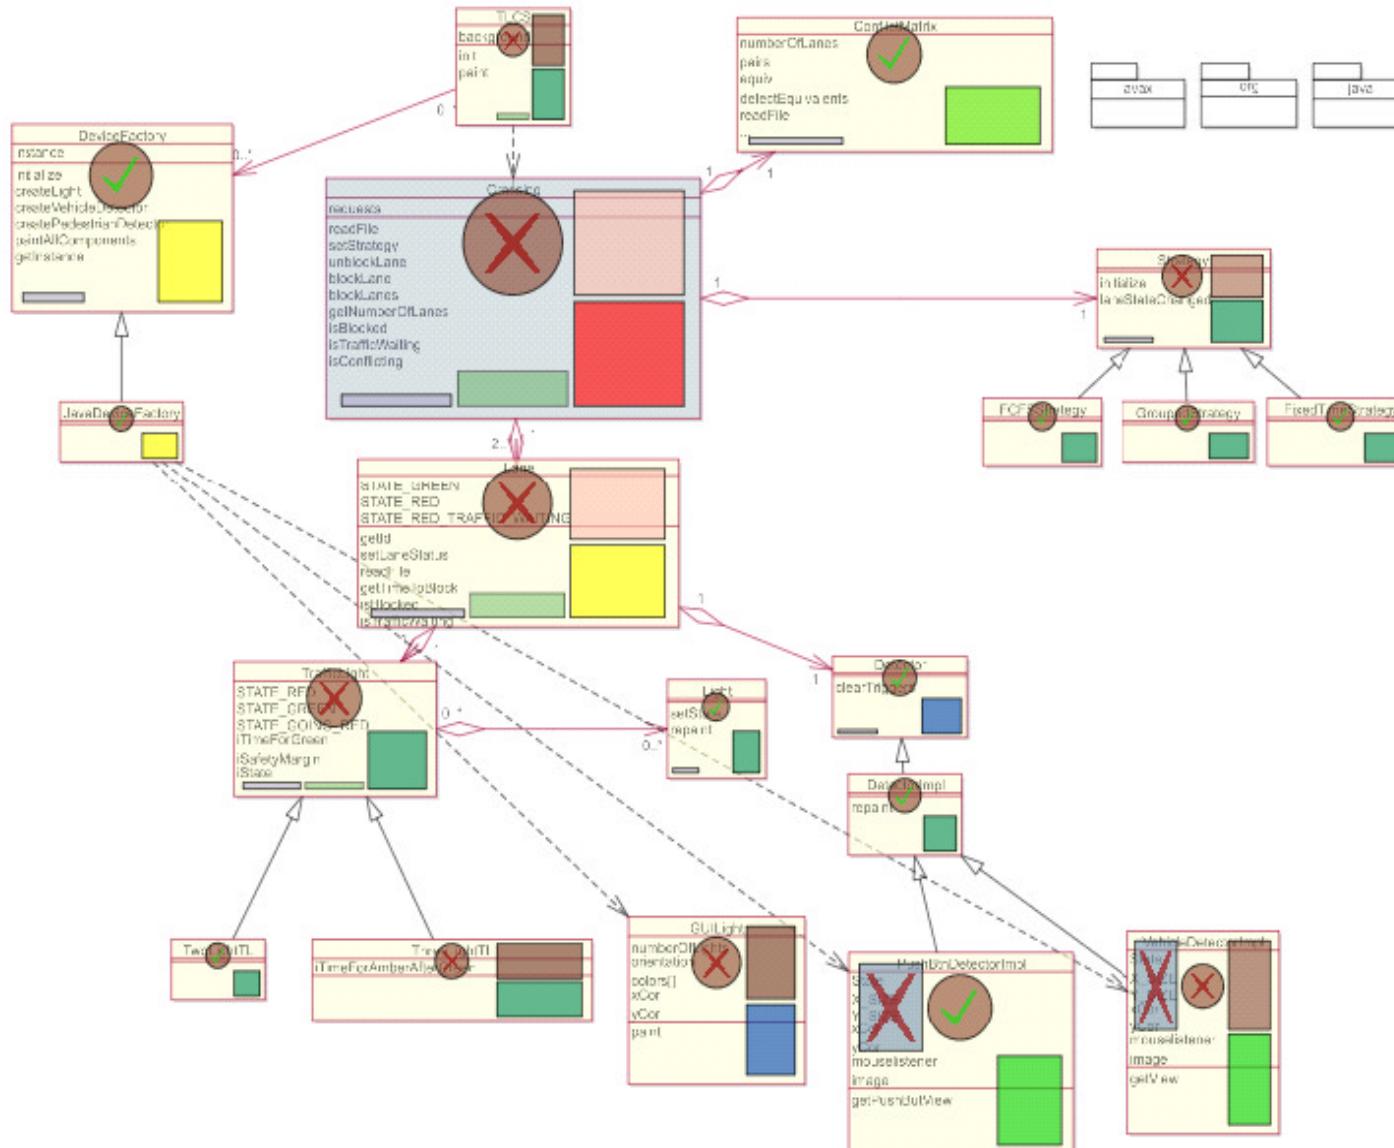

- Adding quality metrics to the workflow structure
  - # of parallel executions
  - sizes of input/output data and quality scores
  - analysis execution time
  - tools and their dependencies
  - resources required (*i.e.* CPU, RAM)

# Adding quality metrics to the structural representation

Position Metrics (X,Y)

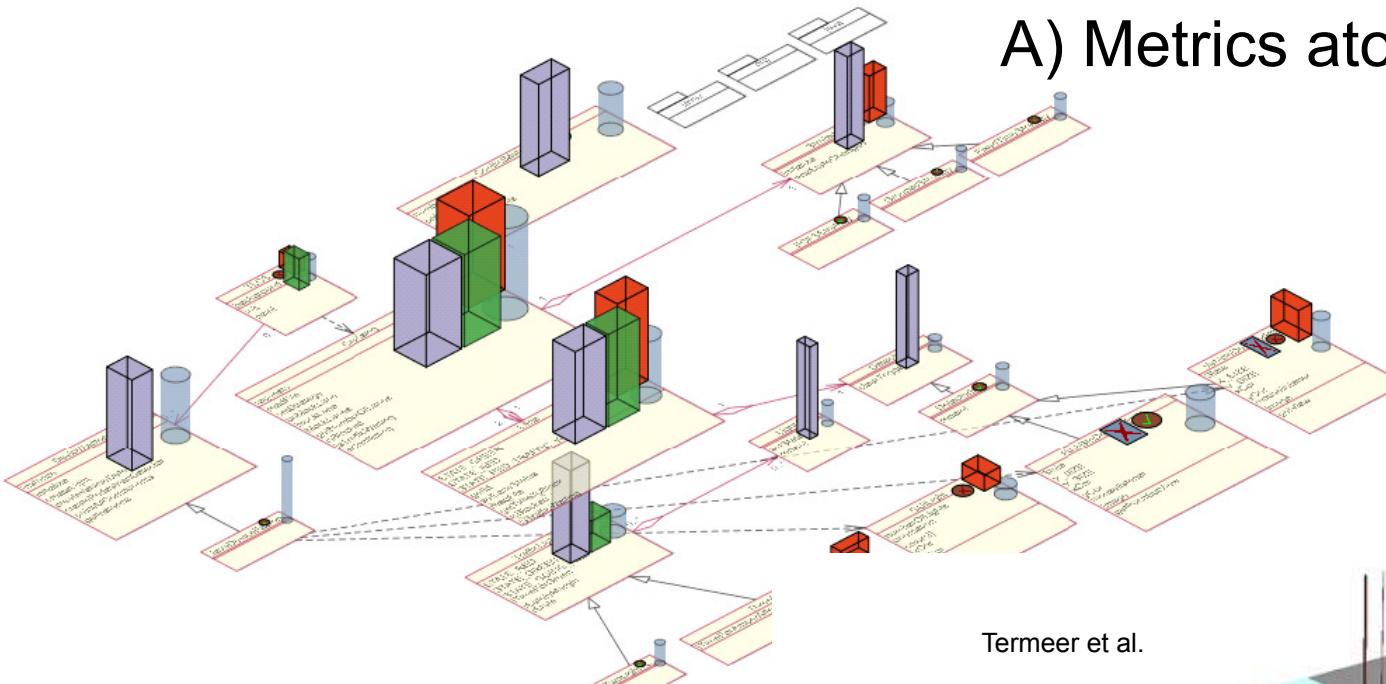

# Adding quality metrics atop of a given diagram

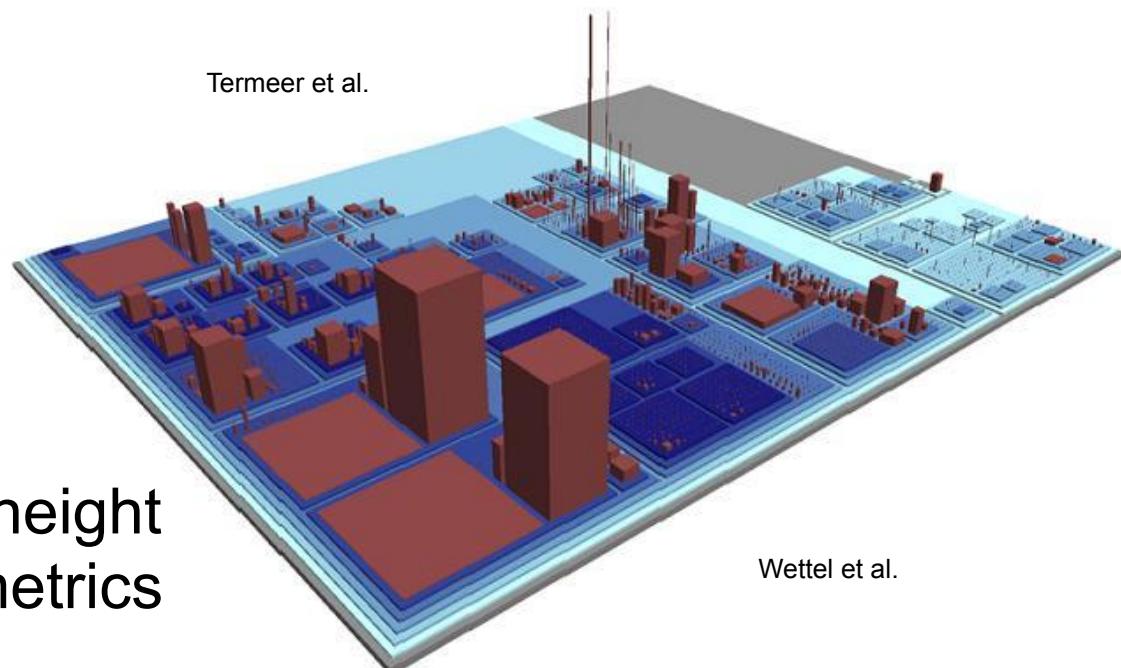

# Adding metrics in 3D

A) Metrics atop of the diagram

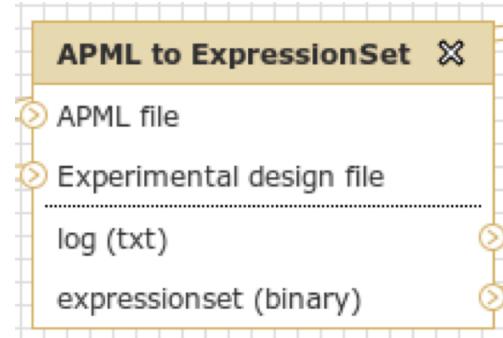

Termeer et al.

B) Using sizes and height  
to show metrics

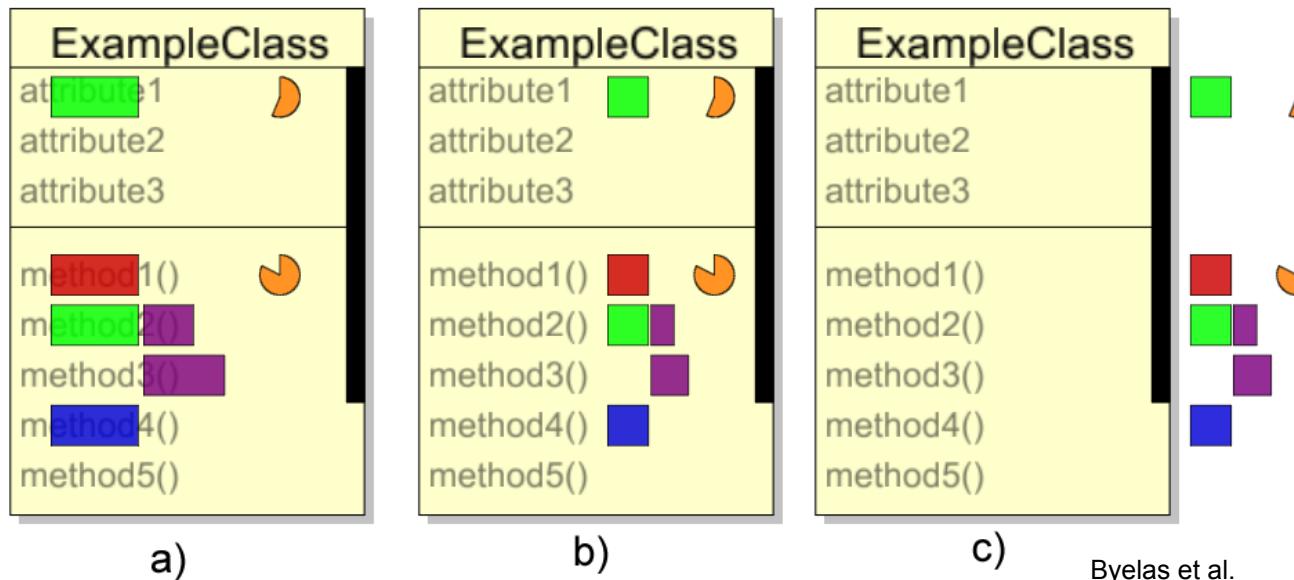

Wettel et al.

# Adding metrics on the level of entity attributes

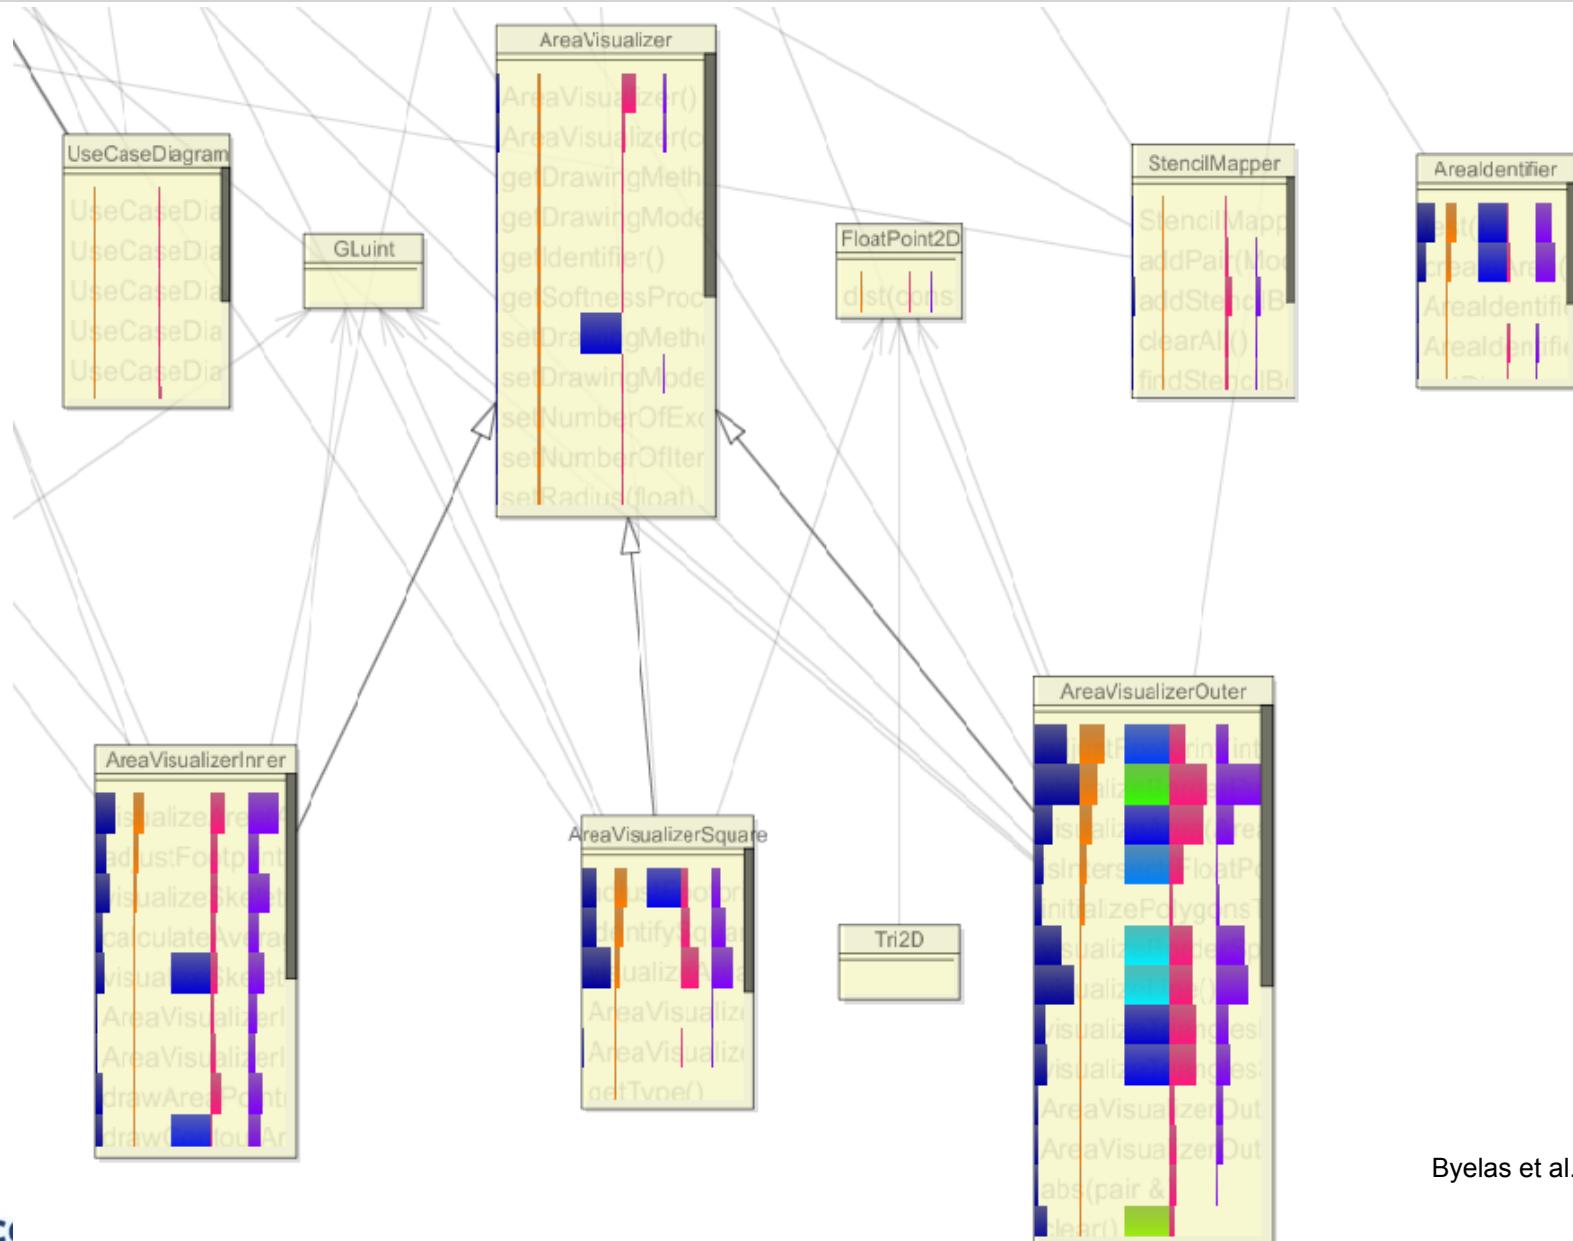

A) Galaxy workflow element

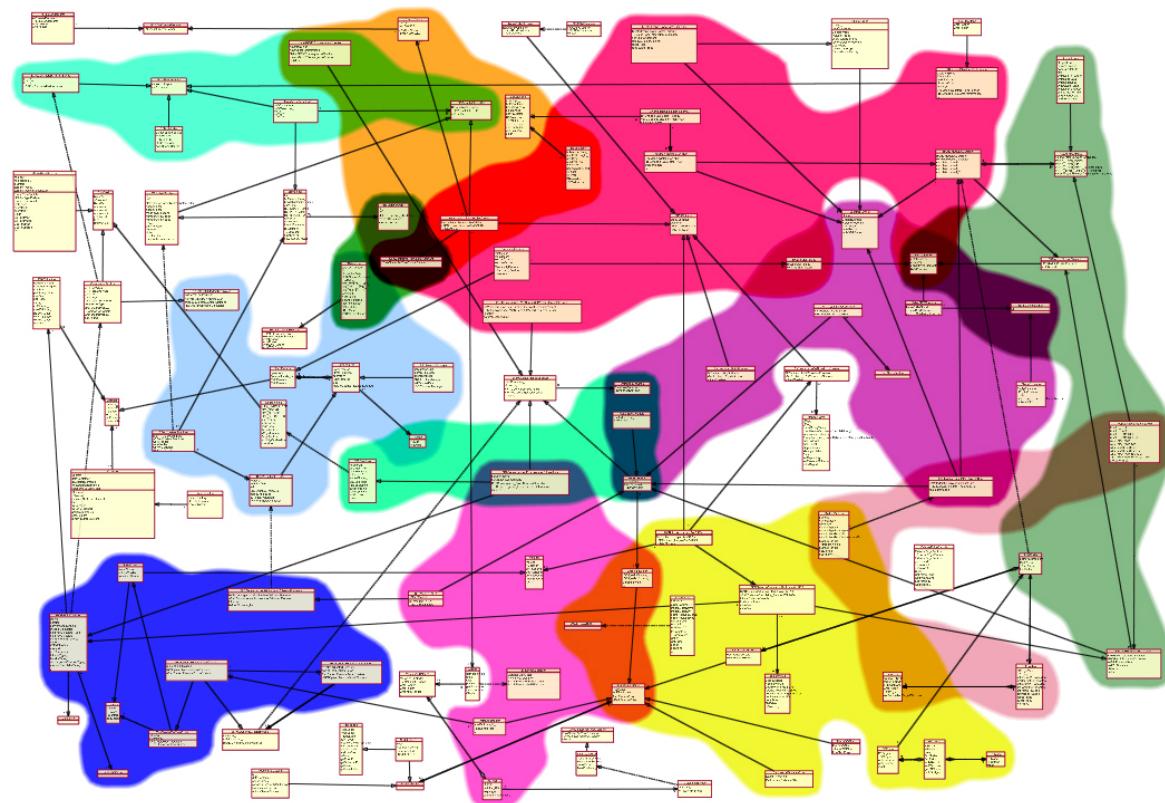

B) Adding metrics for UML class attributes

# UML class diagram with 5 attribute level metrics

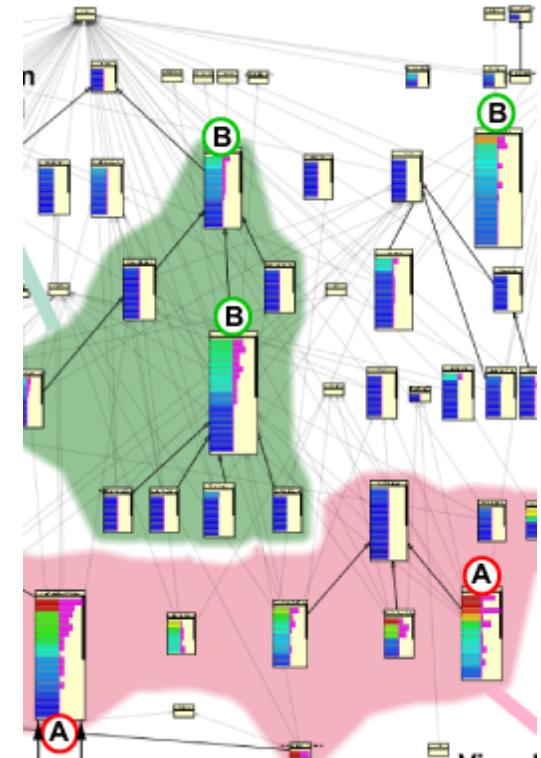

Byelas et al.

# Metrics on different levels of detail

Byelas et al.

A) Showing workflow areas

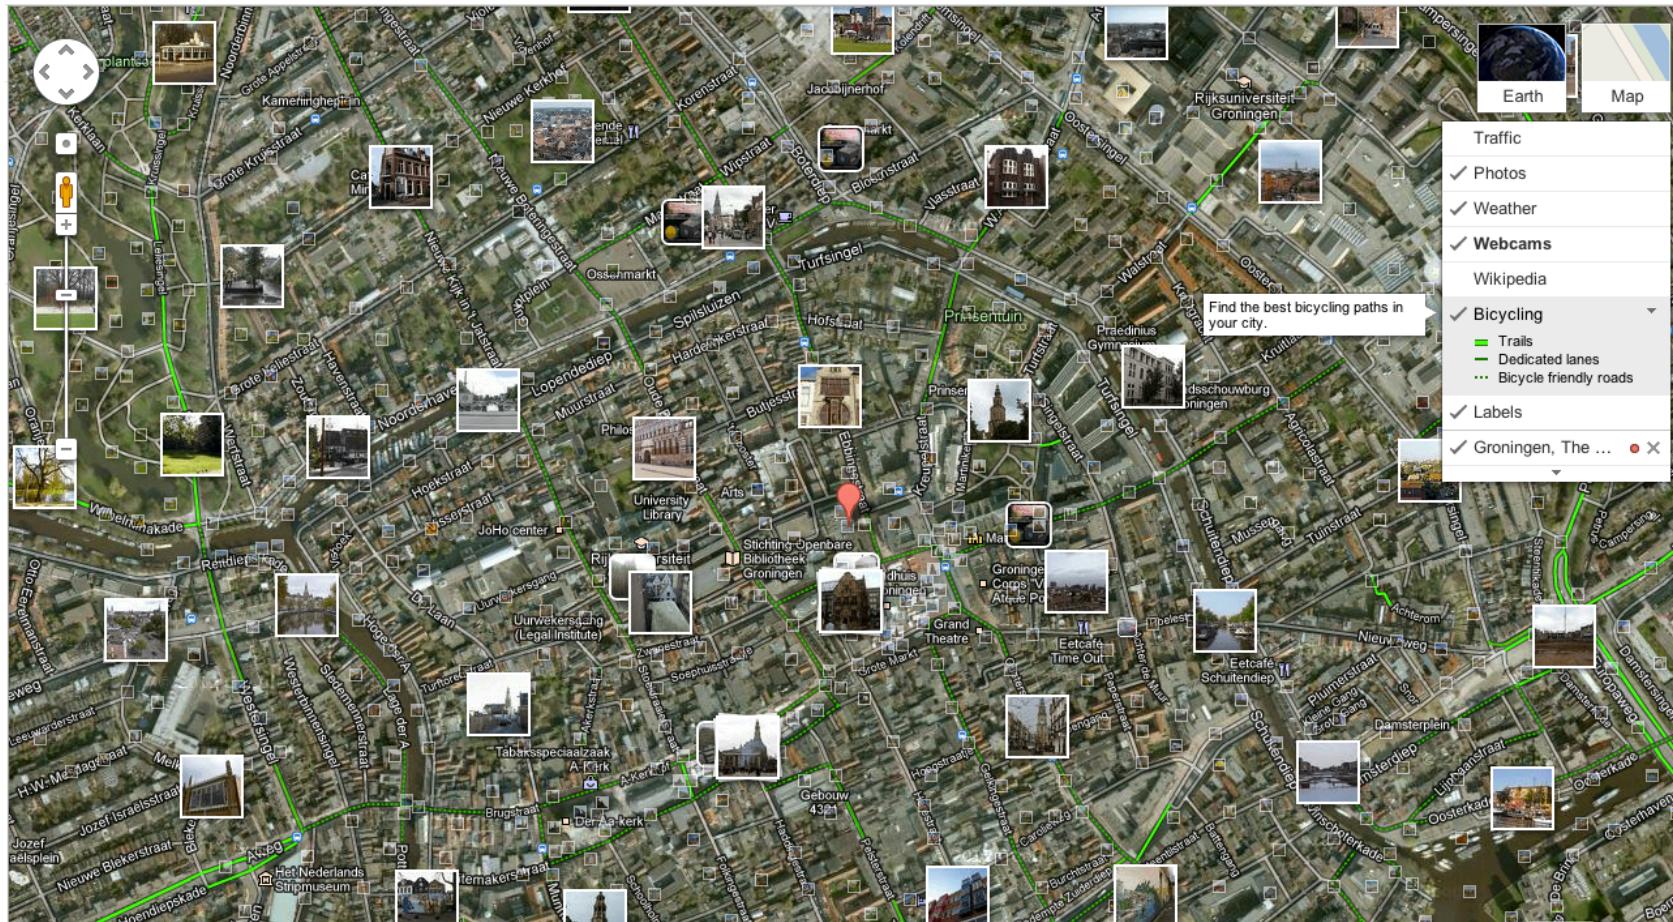

Byelas et al.

B) Metrics on  
different levels

# Conclusion

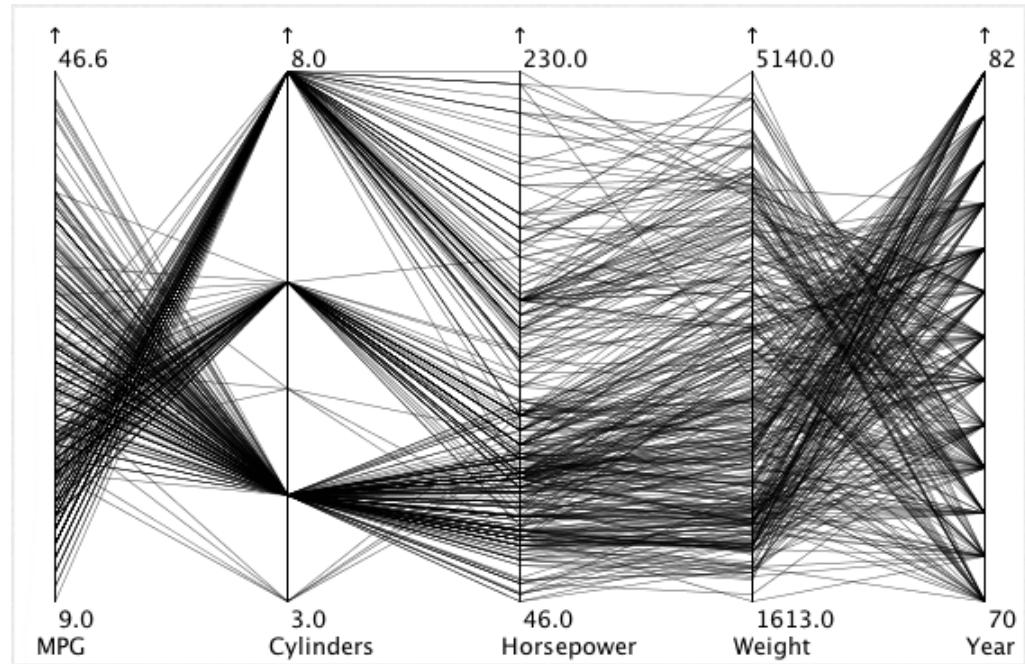

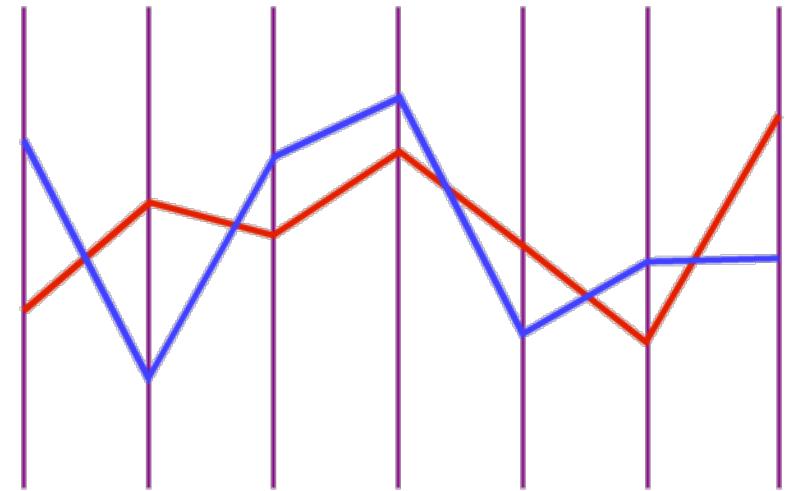

# Multi-scale visualization for workflow structure

Google Maps

- Can a workflow be shown in the same way?
- Easy to hide/highlight different aspects

# Workflow behavior visualization

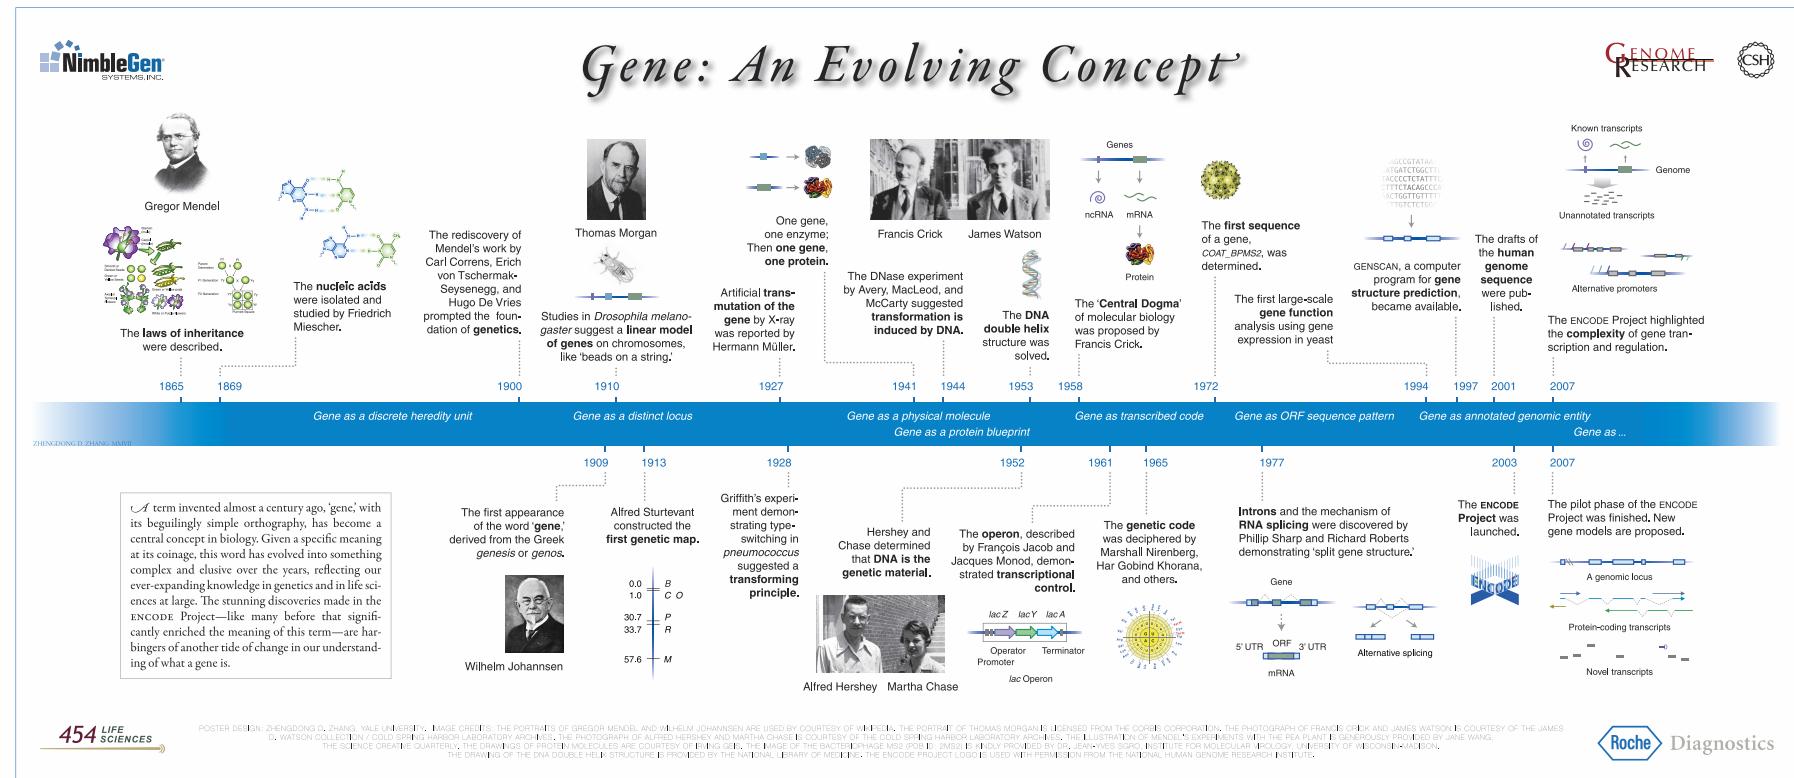

<http://eagereyes.org/>

Can we use parallel coordinates to show how

- analysis parameters
- execution settings

influence analysis results?

# Workflow evolution visualization

- Can we use timelines to show how a workflow has been changed?
- What components were introduced/removed and when/why?

# Questions?

## Imputation pipeline

This manual explains how one can do imputation. The analysis efficient it's needed to devide the

- *Preparing the reference:* here the reference genome is prepared.
- *Preparing and QCing the study data:* all the study data is prepared. This involves chunking the study data in a user specified number of SNPs. This extensive chunking process takes approximately 10 hours per chunk of 2000 SNPs and
- *Phasing:* phases the data using MaCH
- *Imputation:* consists of imputing the phased data into the reference genome.

## Next-generation sequencing pipeline

Next-generation sequencing methods produce a growing volume of data, leading to increasing difficulties in analysis. This manual describes how one can simplify, parallelize and distribute such analysis across high performance computing clusters using a standardized pipeline and the Molgenis Compute framework.

The pipeline is comprised of best-practice open-source software packages used in multiple institutions leading to high quality results. The four main parts of the pipeline are:

- *Alignment:* here alignment is performed using Burrows-Wheeler Aligner BWA. The produced SAM file is converted into BAM format.
